

Instructions for Science Experiment – LESSON 1 (Gravity)

Watch the video clips of the experiment being carried out.

Use the information to fill in your worksheet about the experiment.

When you write the measurements they only need to be an approximate answer (i.e. whole and half centimetres) and not specific.

For your information the balls dropped were:

- A colourful juggle ball
- A very small fishing weight
- A white golf ball and a gold bauble (these were about the same size but different weights).

Of course, if you want to carry out the experiment yourself you can!
