

Wednesday 27th January 2021

Based on the parachute investigation, we will be finding out which spinner falls to the floor first – the bigger one or the smaller one. It is really important to drop the spinners from the same height to make it a fair test. If they are dropped at the same time it will be easy to find out which spinner stays in the air the longest. Think about what this means in terms of air resistance for your conclusion.

Spinner Investigation

What are you trying to find out?

What will you need?

How will you make your experiment a fair test?

How will you record your results?

Draw a labelled diagram of your experiment:

What do you predict will happen and why?

Conclusion (What I found out)
