

Angles on a Straight Line

Aim

- I can recognise angles on a straight line and find missing angles.

Success Criteria

- I know that angles on a straight line total 180° .
- I can find missing angles on a straight line.

Angles on a Straight Line

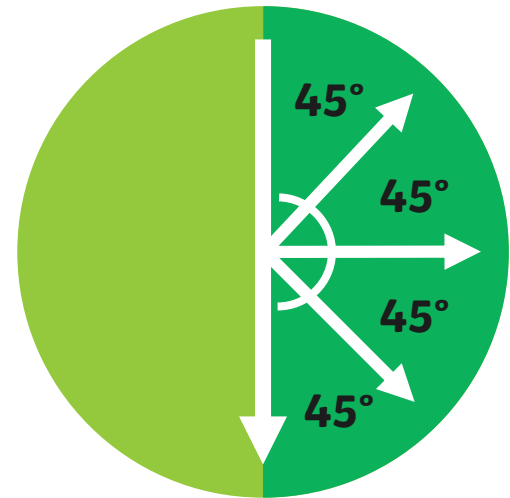

A straight angle measures 180° .

180° is also a half turn.

180° contains two 90° right angles.

180° contains four 45° angles.

Angles on a Straight Line

We can use these the known fact that angles on a straight line total 180° to help us calculate missing angles.

$$180^\circ - 120^\circ = 60^\circ$$

Angle Calculations

$$A = 128^\circ$$

$$A = 118^\circ$$

Angle Calculations

$$A = 52^\circ$$

$$A = 42^\circ$$

Angle Calculations

$$A = 87^\circ$$

$$A = 87^\circ$$

Angle Calculations

$$A = 32^\circ$$
