

BOUNCY EGGS

You'll need

Egg
Jar or glass
Vinegar

Instructions

Carefully place the egg in the jar.

Cover the egg with vinegar and leave for 24 hours.

Carefully rinse the egg under water and place back in the vinegar until you can wash away the shell easily.

Extra Challenge

Can you bounce the egg?

At what height does it break?

If you want to remove the shell faster, rinse it every couple of hours and place back in fresh vinegar!

The acidic vinegar dissolves the calcium carbonate in the shell, leaving just the membrane behind.
